SUMMARY

Maps and concise tables are presented which show TOVS HIRS/2 data products, resolution size, and sounding location for the FIRE/SRB Wisconsin experiment region from October 14 through November 2, 1986. The data presented are the result of a special analysis of the HIRS/2 sounder from the NOAA-9 and -10 satellites.

INTRODUCTION

A field experiment was conducted in Wisconsin during October 1986 for purposes of both intensive cirrus-cloud measurements and Surface Radiation Budget (SRB) algorithm validation activities. The cirrus-cloud measurements were part of the First ISCCP (International Satellite Cloud Climatology Project) Regional Experiment (FIRE) as described by Starr¹. The algorithm validation activity was the first experiment of an SRB algorithm intercomparison program based on scientific recommendations from Suttles and Ohring². Both the FIRE and SRB experiments require use of TIROS Operational Vertical Sounder (TOVS) data products. The standard TOVS data product available to the public consists of data from three instruments: (1) the High Resolution Infrared Sounder (HIRS/2), (2) the Stratospheric Sounding Unit (SSU), and (3) the Microwave Sounding Unit (MSU). Data from these instruments are combined and output for boxes which are 300 km or larger in size. The result is that the standard-reduction TOVS product gave only a limited number of soundings near ground stations of the FIRE/SRB Wisconsin experiment (see Whitlock et al.³). An increased number of soundings near the stations can be obtained if the HIRS/2 instrument data are analyzed alone because HIRS/2 spatial resolution is 17 km at the subsatellite point. Subsatellite point resolution of the SSU and MSU instruments is 147 km and 109 km, respectively. The result of such a single-instrument analysis is that some stratospheric temperatures and column soundings under heavy cloud conditions will be lost. It is the purpose of this document to present the high-spatial-resolution HIRS/2 data in a concise form such that investigators

from both programs may quickly evaluate the usefulness of this satellite product to their own particular investigation.

DATA DESCRIPTION

Figures 1 through 18 are maps showing locations of the high-resolution HIRS/2 soundings obtained during the FIRE/SRB experiment. The surface stations are those locations within a 125- by 125-km array where longwave Eppley PIR instrument measurements were made on a continuing basis. Locations of these individual stations near airports were as follows:

<u>Station</u>	<u>Latitude</u>	<u>Longitude</u>	<u>Elevation</u>
1. Madison (Truax)	43.1300°	89.3217°	263.7 m
2. Ft. McCoy	43.9583°	90.7550°	259.1 m
3. Stevens Point	44.5483°	89.5317°	339.6 m
4. Baraboo	43.5217°	89.7717°	301.5 m
5. Adams Co.	43.9667°	89.8000°	299.4 m
6. Wautoma	44.0417°	89.3050°	264.6 m
7. Oshkosh	43.9933°	88.5583°	245.7 m
8. Wausau	44.9250°	89.6200°	366.5 m

Summarizing results from the figures, a total of 778 HIRS/2 soundings are within 30 km of a FIRE/SRB surface station during the experiment period. (Approximately 55 percent are during daylight hours.) This compares with the fact that only 46 of the standard-resolution TOVS centroids were near the surface station array³.

Table 1 gives detailed locations and times for those HIRS/2 soundings within 30 km of a FIRE/SRB ground station. These values may be used to more closely coordinate the satellite data with experimental measurements. Also included are box sizes associated with each sounding. Size values are included here such that the user may assess how far the satellite view angle was off nadir. Box size at the subsatellite point may be as small as 18 by 18 km. Boxes with a size of 63 by 32 km are taken from a sounding with a viewing angle of 49.5°.

Most of the standard TOVS vertical sounding parameters are included in the table for each sounding location. Rows or columns with **** symbols denote either missing data or parameters which cannot be obtained from the HIRS/2 instrument. A description of the basic HIRS/2 analysis method and data limitations for the vertical sounding parameters are given by Woolf⁴. The technique used for cloud parameter analysis is given by

Wylie and Menzel⁵. Reduction of the basic HIRS/2 data to atmospheric parameters was conducted at the Space Science and Engineering Center, University of Wisconsin. Trajectory analysis and ground station synthesis were conducted at the NASA Langley Research Center.

CONCLUDING REMARKS

The surface station array examined in this study was approximately 125 by 125 km in size. Over the 20-day period of the investigation, 778 NOAA-9 and -10 satellite HIRS/2 soundings were obtained and analyzed. Approximately 55 percent were during daylight hours. These high-spatial-resolution soundings should be of interest to FIRE and SRB investigators.

National Aeronautics and Space Administration			
1. Report No.	2. Government Accession No.	3. Recipient's Catalog No.	
NASA TM-100522			
4. Title and Subtitle High-Spatial-Resolution TOVS Observations for the FIRE/SRB Wisconsin Experiment Region from October 14 through November 2, 1986		5. Report Date	January 1988
		6. Performing Organization Code	
7. Author(s) Charles H. Whitlock, Donald P. Wylie, and Stuart R. LeCroy		8. Performing Organization Report No.	
		10. Work Unit No.	
		672-22-20-70	
9. Performing Organization Name and Address NASA Langley Research Center Hampton, VA 23665-5225		11. Contract or Grant No.	
		13. Type of Report and Period Covered	
		Technical Memorandum	
12. Sponsoring Agency Name and Address National Aeronautics and Space Administration Washington, DC 20546		14. Sponsoring Agency Code	
15. Supplementary Notes Charles H. Whitlock Donald P. Wylie NASA Langley Research Center Space Science and Hampton, VA 23665-5225 Engineering Center University of Wisconsin Madison, WI 53706 Stuart R. LeCroy PRC Kentron Hampton, VA 23666			
16. Abstract Maps and concise tables are presented which show TOVS HIRS/2 data products, resolution size, and sounding location for the FIRE/SRB Wisconsin experiment region from October 14 through November 2, 1986. The data presented are the result of a special analysis of the HIRS/2 sounder from the NOAA-9 and -10 satellites.
